

Site Master™ S311D/S312D

Cable and Antenna Analyzer, 2 MHz to 1600 MHz
Spectrum Analyzer, 100 kHz to 1600 MHz

Site Master™ is the perfect instrument for Land Mobile Radio and Public Safety system applications.

Anritsu's S311D/S312D Site Master is the latest addition to the successful Site Master cable and antenna analyzer series. It builds upon Anritsu's expertise in developing accurate, portable, rugged, and easy-to-use field instruments with a rich set of features aimed at simplifying life for field use.

The Site Master is the perfect instrument for Land Mobile Radio (LMR) and Public Safety system technicians testing the RF performance of P25 and TETRA radios in the VHF/UHF, 700 MHz and 800 MHz bands. With its 2 MHz frequency coverage, the Site Master works well for defense applications in the HF band. The S31xD is also ideal for broadcast and cellular applications.

The high performance 1600 MHz cable and antenna analyzer can be used to sweep cables and antennas at the frequency of operation using the Return Loss and VSWR measurements. The Distance-To-Fault (DTF) measurement can easily spot poor connections, contamination, damaged cables, water penetration, and bad antennas. Site Master's Frequency Domain Reflectometry (FDR) techniques break away from the traditional fix-after-failure maintenance process by finding small, hard to identify problems before major failures occur.

The S312D combines the high performance cable and antenna analyzer with a fully functional spectrum analyzer. The -135 dBm noise floor is needed to find low level interfering signals which can interfere with LMR and SMR systems. The Interference analyzer provides helpful tools to aid in diagnosing and tracking interference. The S312D can be equipped with a cable and antenna analyzer, spectrum analyzer, interference analyzer, channel scanner, Received Signal Strength Indicator (RSSI), AM/FM demodulation, and RF power meter.

Rugged and Reliable

Because the Site Master was designed specifically for field environments, it can easily withstand the day-to-day punishments of field use. The instrument is almost impervious to the bumps and bangs typically encountered by portable field equipment.

Easy-to-Use

The menu driven user interface is intuitive and easy to use and requires little or no training time. A standard high resolution TFT color display provides visibility in broad day light. A full range of markers enable the user to make accurate measurements. Limit lines simplify measurements allowing users to create quick and simple pass/fail tests.

Take it anywhere

Weighing less than 5 lbs (2.3 kg) with its rechargeable NiMH battery, the S311D/S312D moves effortlessly from ground installations to anywhere where critical measurements are needed. Sophisticated charging circuits optimize the life of the battery. Replacing the battery in the field takes no time at all and requires no tools.

Six built-in Languages

The Site Master is equipped with local language support in English, Chinese, Japanese, French, German, and Spanish.

The Site Master is a multi-function field solution

Function	Benefits
Cable and Antenna Analyzer (S311D/S312D)	Characterize cable and antenna systems, and pinpoint location of faults.
Spectrum Analyzer (S312D)	Easily locate, identify and record various signals with high accuracy
Interference Analyzer (312D)	Take advantage of the -135 dBm noise floor to track low level interference with the Spectrogram display and the Received Signal Strength Indicator (RSSI).
AM/FM Demodulator (S312D)	Built-in demodulator for AM, narrow band FM, wide band FM, and SSB allows technician to listen to and identify interfering signals.
Transmission Measurement (S312D)	Characterize and adjust filters, combiners, and duplexers.
Channel Scanner (S312D)	Measure frequency, bandwidth and power of multiple transmitted signals.
CW Signal Generator (S312D)	CW source to test low noise amplifiers.
High Accuracy Power Meter (S311D/S312D)	Use a high performance sensor to measure RF power of CW and modulated signals with better than 0.16 dB accuracy. Eliminates the need for a separate watt meter.
Power Meter (S311D/S312D)	Make RF power measurements without an external detector.
GPS Receiver (S311D/S312D)	Provides location (latitude, longitude, altitude) and UTC time information.
Bias Tee (S312D)	Bias the amplifier using the internal bias tee. Eliminates the need for external supplies.
2 MHz Low Frequency Option (S311D/S312D)	Extend the lower frequency range of the cable and antenna analyzer to 2 MHz to cover the HF band.

High Performance Cable & Antenna Analyzer and Spectrum Analyzer

Spectrum Analysis (S312D)

The S312D integrated Spectrum Analyzer provides the ultimate in measurement flexibility for field measurements. The Site Master has dedicated routines for critical smart measurements including: Channel Power, Carrier-To-Interference, occupied bandwidth, interference analysis, adjacent channel power (ACPR), and AM/FM demodulation. These are increasingly critical measurements for today's wireless communication systems. The excellent noise floor in the S312D is crucial for tracking low level interference.

Channel Power

The channel power measurement in the S312D provides great flexibility for measuring the rms channel power of P25 and TETRA signals. This smart measurement allows you to change the RBW/VBW, detection method, frequency range, attenuator, and preamp settings and much more.

AM/FM/SSB Demodulator

A built-in demodulator for AM, narrowband FM, wideband, FM and single sideband (USB or LSB) allow a technician to easily identify interfering signals.

Cable and Antenna Analysis – (S311D/S312D)

The cable and antenna analyzer in the Site Master is designed to provide field users with key measurements to sweep cables and antenna systems. The Site Master uses the superior Frequency Domain Reflectometry (FDR) approach for its Return Loss/VSWR, Cable Loss, and Distance-To-Fault measurement.

The Site Master has the sensitivity to identify poor connections, damaged cables, water penetration, and bad antennas. It is also equipped with a special RF immunity protection that allows you to make accurate measurements even in RF rich environments.

Return Loss / VSWR

Return Loss and VSWR measurements ensure conformance to system specifications.

Cable Loss

The cable loss measurement measures the level of insertion loss within the cable feed line system. The Site Master automatically computes the average cable loss value over the measured frequency range.

Distance-To-Fault (DTF)

Although a return loss test can tell user the magnitude of signal reflections, it cannot tell the precise location of a cable defect. The DTF measurement provides the clearest indication of trouble areas as it tells us both the magnitude of signal reflection and the location of the signal anomaly.

2 MHz Frequency Extension (Option 2, S311D/S312D)

The standard cable and antenna analyzer spans from 25 MHz to 1600 MHz. The lower frequency range can optionally extend to 2 MHz and provide Return Loss/VWSR, Cable Loss, and DTF measurements from 2 MHz to 1600 MHz.

The Site Master offers a wide range of options

Bias Tee (Option 10A, S312D)

The optional (+12 to +24V) bias tee is integrated into the Site Master and is designed for applications where both DC and RF signals must be applied to a device under test.

Interference Analyzer (Option 25, S312D)

The interference analyzer option displays interference in four different ways: Spectrogram, RSSI, Signal Strength, Signal ID.

The Spectrogram is a three dimensional display of frequency, power, and time of the spectrum activity. The RSSI feature is useful to observe the signal strength at a single frequency over time (seven days).

Transmission Measurement (Option 21, S312D)

The transmission measurement option coupled with the excellent dynamic range allows users to view and adjust the RF performance of critical RF devices including filters, duplexers, transmitter combiners, receiver multi-couplers and tower top amplifiers.

CW Signal (Option 28, S312D)

The CW signal generator provides a CW signal source to test low noise amplifiers, repeaters, and receivers. The external attenuator can be varied from 0 to 90 dB in 1 dB steps. The display shows the output power and the frequency. This feature can be operated simultaneously with the power monitor option.

GPS Receiver (Option 31, S311D/S312D)

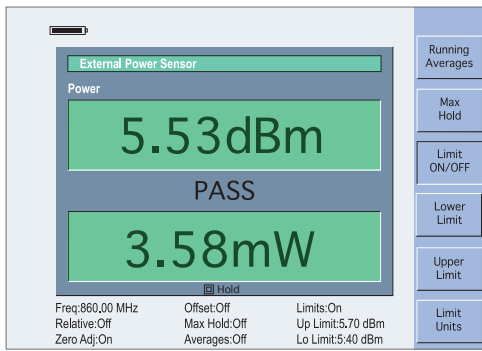

Built-in GPS provides location information (latitude, longitude, and altitude) and Universal Time (UT) information. Site Master can stamp each trace with location information to check if the measurements are taken at the right location. Site Master stores the GPS location information until the unit is turned off. This stored location information can be used to stamp traces taken indoors at the same cell site location. The GPS option is offered with a magnet mount antenna with a 15-foot (~ 5 m) cable to mount on the car or other useful surface.

RF Power Measurements for a variety of applications

High Accuracy Power Meter (Option 19, S311D/S312D)

Anritsu's PSN50 sensor makes high accuracy power measurements from 50 MHz to 6 GHz. The sensor provides true RMS measurements from -30 to +20 dBm and provides accurate measurements for CW and digitally modulated standards such as P25, TETRA, DIMRS, and IDRA. Power is displayed in both dBm and Watts. Upper and lower limits can be set for Pass/Fail measurements.

Power Meter (Option 29, S312D)

The power meter performs accurate transmitter power meter measurements from 3 MHz to 1600 MHz. The Spectrum Analyzer is used to measure channel power. No external sensor or detector is required. This option is ideal for channelized power measurements as it eliminates the need for external filters.

Power Monitor (Option 5, S311D/S312D)

The optional Power Monitor features precision, high return loss (low SWR) detectors ideal for broadband CW power monitoring. A wide range of detectors is available with upper frequency ranges from 3 GHz to 50 GHz. Display formats include absolute power (dBm or Watts) and relative power (dBr or %). Built-in Auto-Averaging automatically reduces the effects of noise while zeroing control allows optimum measurement accuracy at low power levels.

Channel Scanner (Option 27, S312D)

The channel scanner option gives the user another convenient way to view power by measuring multiple transmitted signals. The focus of the measurements made with this option is on channelized communication systems such as land mobile systems and maritime communication. The span and step size are adjustable and up to 20 channels can be viewed simultaneously.

Master Software Tools™

Master Software Tools provides the user with comprehensive data management and post processing tools which augment the capabilities of the Site Master. This software provides a simple and easy way to manage, archive, analyze, print measurement reports, customize your cable list, antenna list, signal standards list and keep your Site Master up to date with the latest instrument firmware. Master Software Tools (MST) is a Windows program which is included with every Site Master instrument. For the most current version of Master Software Tools, please visit www.us.anritsu.com.

- Up to 300 Site Master trace memory locations can be downloaded with a single menu selection
- Build historical records with an unlimited number of traces in one document
- Intelligent Trace Renaming features allow you to rename hundreds of traces in minutes instead of hours.
- Edit and create custom signal standards and cable lists
- Create custom reports
- View Spectrogram displays in 3D
- Copy markers and limit lines from one trace to all the traces in a specific folder with easy to use group edit functions
- Use the Product Update feature to make sure you always use the latest instrument firmware.
